How to Quarantine Emails Using the Quick Step

To quarantine DCL3 e-mail in Outlook using a Quick Step, take the following steps.

1. You can sort your categories in the e-mail list by clicking the Category header in the inbox. This will separate your e-mails by category. You will see the DCL3 data containing e-mails you marked with the IF category. They should appear at the top of the e-mail list or at the bottom.

2. There are multiple ways to move the IF category e-mails.
   - You can click and drag each e-mail to the DCL3 Emails folder or select multiple folders and then click and drag.
   - Another way is to use the Move to IF quick step, you have made earlier by selecting the e-mails and pressing the button in the Quick Step group or by using the assigned shortcut key while having the e-mails selected.
