

## TCN 105 Laser and Lab Safety

1.0 Credits

### **How this course works....**

The course is divided into two parts, laser safety and lab safety, with five modules in each part. Refer to the course schedule (calendar) for the due dates for each of the modules. Additional resources are available in the Laser and Lab Safety folders on the Home Page.

Each module consists of a video, text reading or web site (or some combination of these) and a knowledge assessment quiz. The quiz will be available up to one week after the module is presented, then it will be taken down. You may take each quiz up to two times (with a one hour delay between attempts). Your grade will be the average of your attempts. Quizzes consist of true/false; multiple choice; short answer and paragraph format. Some questions may have to be 'manually graded' by the instructor so you may not see your final quiz grade right away.

### **For each module you should:**

- \* Read the study questions prior to viewing the video or reading the text questions,
- \* Take the knowledge assessment quiz,
- \* Retake the quiz if necessary.

**If you have questions, email the instructors: [Professor Donnelly](#) (laser safety) or [Professor Knowles](#) (lab safety)**
