SYLLABUS

BIO 212 - ANATOMY & PHYSIOLOGY II

Spring Semester, 2008

Lecture: CRN 10219; Section M01; 1100 - 12:25 M/W, Rm. 216 Lab: CRN 10220; Section M1A; 1:00 - 4:00 M, Rm. 214 or Lab: CRN 10221; Section M1B; 1:00 - 4:00 W, Rm. 214

> Three Rivers Community College Mohegan Campus Norwich, Connecticut 06360

William "Kirk" Kirkpatrick, Professor

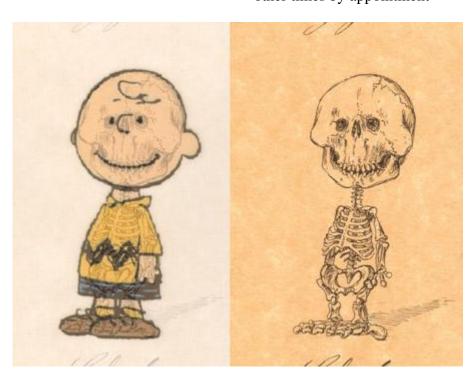

Office Phone: 383-5282 Home Phone: 449-8828 Cell Phone: 235-3690

e-mail: williamkirk01@comcast.net or wkirkpatrick@trcc.commnet.edu

Office Hours: Monday and Wednesday: 10:00 - 11:00

Tuesday and Thursday: 2:00 - 3:00

other times by appointment

<u>COURSE:</u> BIO 212 - Anatomy & Physiology II is the second semester of a two semester sequence. <u>Biology 211 - Anatomy & Physiology I must be taken prior to this course.</u> This is especially important if transferring to a four-year institution with a major requiring a full academic year of anatomy and physiology or if the student is enrolled in Three River's nursing. <u>BIO 211 with a minimum grade of C is the pre-requisite for BIO 212</u>. <u>BIO 211 and 212 with a minimum grade of C+ is also the pre-requisite for the TRCC nursing program</u>. BIO 212 presents the students with a lecture/laboratory study of endocrinology, reproduction, hematology, cardiovascular, respiratory, digestive, excretory systems, and acid-base balance.

CREDIT: 4 credit hours consisting of 3 contact hours of lecture meeting M/W 11-12:25 and 3 hours of laboratory per week meeting M or W 1:00 – 4:00.

REQUIRED TEXTS;

Fundamentals of Anatomy and Physiology by Frederic Martini, 7th edition, Benjamin-Cummings Publishers. (with COURSE COMPASS)

Pictorial Anatomy of the Cat, by Stephen Gilbert, University of Washington Press, 1999.

RECOMMENDED TEXTS: (optional)

Applications Manual for Fundamentals of Anatomy and Physiology, by Martini, Welch, and Newsome, 7th ed. Benjamin Cummings Publishers. (included free with the textbook)

A Photographic Atlas for the Anatomy & Physiology Laboratory, by K.M. Van De Graaff & J.L. Crawley, Morton Publishing Co. 5th ed.

Fundamentals of Anatomy and Physiology, The Study Guide, by Charles Seiger, Benjamin Cummings Publishers, 7th ed. ISBN: 0-13-019691-6

Outline of Cat Anatomy with Reference to Human, by Stephen Gilbert, Univ. of Washington Press 2000, ISBN: 0-295-97818-x

The student is also expected to provide their own dissecting kit and gloves, which are available from the bookstore.

GENERAL COURSE OBJECTIVES:

- 1. Provide students with a transferable laboratory science to satisfy the science requirements of Three River's LAS or GS Associate Degree.
- 2. To fulfill pre-requisite and co-requisite anatomy and physiology requirements for Three River's Nursing program.
- 3. Provide students with an undergraduate level study of human body systems.
- 4. Provide students with a foundation for study of the medical, biological, or physical sciences.
- 5. Provide students with critical thinking and problem solving skills.
- 6. Demonstrate the biological sciences and how they relate to other disciplines.
- 7. Illustrate the interdependence of all life forms operating on natural laws with the physical environment.

8. Encourage not only awareness of the student's natural uniqueness but also their role as an interrelated biological organism of this planet.

CLASS ATTENDANCE;

Attendance of class is required. Attendance is noted. Absences can be very detrimental due to the nature of the material. An explanation of all absences is very much appreciated, especially if presented in advance when possible. It is the student's responsibility to obtain materials and notes for any classes that they miss.

METHODS OF STUDENT EVALUATION; GRADING POLICIES

- A. The student's grade for the course represents their ability to master course objectives, attitude, rate of improvement, proficiency, and knowledge of course material.
- B. Final letter grades are determined by converting accumulated points into a percentage score using the following formula:

percentage score = <u>number of points you have accumulated on exams</u> X 100 total number of points possible

C. Points are obtained by the following methods of evaluation:

1. Lecture:

- a. <u>Quizzes</u>: Weekly quizzes worth 15 points each will be given on-line at the CourseCompass web site (<u>www.coursecompass.com</u>) on Thursdays. The quiz will be available from 6 am to midnight and will be on a timer. Access to the quiz is password protected. The password will be given to you. These quizzes will consist of 15 multiple choice questions (at 1 point each) covering lecture material given since the previous quiz. <u>If missed</u>, <u>they cannot be made-up</u>, however the lowest score will be dropped at the end of the semester.
- b. <u>Major Exams</u>: Three major exams, non-comprehensive, of 140 points will be given in class as scheduled (see p. 25)
- c. Extra Credit: There will usually be extra credit questions attached to the major exams. These will be essay questions having variable point value. In addition, extra points may be given from leaning modules on the ADAM Interactive Physiology CD that comes with your textbook or accessed from Course Compass. Details will be within the learning folders in the Assignment section of Course Compass.

2. Laboratory:

- a. **Quizzes**: A 40 point lab quiz over hematology and a 15 point quiz over respiratory physiology and urine analysis will be given.
- b. <u>Practical exams</u>: a 45-point identification exam over the digestive and urogenital system chapters of lab unit II objectives and a 45 point identification exam over circulatory and nervous system chapters of lab unit II and also heart lab unit III-A objectives will be given.

- c. <u>Lab reports</u>: The following written reports will be required: cardiac anatomy (15 points), cardiovascular physiology (15 points), pulmonary function (15 points), and renal regulation of osmolarity (30 points).
- D. Percentage contribution of each evaluation process to the overall lecture/lab score and to the overall grade:
 - 1. weekly quizzes: 2.7% of lecture, 1.9% overall (each); 21% of lecture, 15% overall (all 9 or 10 for the semester)
 - 2. major exams: 25% of lecture, 17.5% overall (each of the three)
 - 3. regulation of osmolarity lab report: 13.6% of lab, 4% overall
 - 4. hematology lab quiz: 18% of lab, 5.5 overall
 - 5. respiratory & renal quiz: 7% of lab, 2.1% overall
 - 6. dissection lab practical exam #1: 20% of lab, 6% overall
 - 7. dissection lab practical exam #2: 20% of lab, 6% overall
 - 8. cardiac anatomy lab report: 7% of lab, 2.1% overall
 - 9 cardiovascular physiology lab report: 7%, 2.1% overall
 - 10. pulmonary function lab report: 7% of lab, 2.1% overall
- E. Exam and quiz questions for lecture and/or laboratory material may consist of multiple choice, true/false, fill in the blank, matching, identification, or essay questions. Some questions might be reserved as an extra credit option.
- F. Absence on examination days:

Students must take exams as scheduled.

- G. Final letter grades for the course are determined by the following steps:
 - 1. Converting lecture points into a percentage score.
 - 2. Converting laboratory points into a percentage score.
 - 3. Combining 70% of the lecture percentage score with 30% of the labor percentage score to determine an overall course percentage score. (Lecture is worth 70% and lab 30% of the final grade.)
 - * *4. The final course grade is determined from the overall course percentage score related to the following percentage scale:

PROCEDURE FOR DROPPING COURSE(S):

A student who finds it necessary to discontinue a course must complete a withdrawal form obtained from the Registrar's Office. The last day to withdraw from a course is April 29. Students who do not withdraw, but stop attending will be assigned an "F" grade.

^{**}The instructor reserves the right to use subjective evaluation, especially in cases where the final percentage score is on a borderline between grades.

ACADEMIC INTEGRITY AT THREE RIVERS

Academic integrity is essential to a useful education. Failure to act with academic integrity severely limits a person's ability to succeed in the classroom and beyond. Furthermore, academic dishonesty erodes the legitimacy of every degree awarded by the College. In this class and in the course of your academic career, present only your own best work; clearly document the sources of the material you use from others; and act at all times with honor

DISABILITIES:

If you are a student with a disability and believe you will need accommodations for this class, it is your responsibility to contact the Disabilities Counseling Services at 383-5240. To avoid any delay in the receipt of accommodations, you should contact the counselor as soon as possible. Please note that I cannot provide accommodations based upon disability until I have received an accommodation letter from the Disabilities Counselor. Your cooperation is appreciated.

REVISIONS TO THE SYLLABUS

The instructor reserves the right to revise the academic schedule, objectives, and/or topical outline contained in this syllabus

SPECIFIC OBJECTIVES FOR THE LECTURE PORTION OF THE COURSE

The following lecture- learning units are within corresponding folders within the Assignment Section of Course Compass. Additional learning aids are also within those folders such as: reading assignments, dates, testing, computer programs within the lab, on-line learning aids from the textbook publisher, class notes and handouts, Internet links, and practice exam questions.

I. **Endocrinology**: study of control by endocrine glands

Upon completion of a study of the endocrine system, the student should be able to correctly answer questions concerning the following:

- A. Describe the basic overall makeup of the endocrine system.
 - 1. List and describe methods of intercellular communication (table 18-1, p. 592)
 - 2. Define the following:

exocrine gland feedback regulation endocrine gland tropic hormone hormone target cells

- 3. Describe the chemical structure groups hormones may be divided into: amino acid derivatives, peptides, lipid derivatives (fig. 18-2, p. 594).
- 4. Describe proposed mechanisms in which hormones initiate responses from target organ cells by discussing lipid solubility, receptor, G-protein, adenyl cyclase, cyclic AMP, protein kinases, phospholipase C, Ca⁺⁺ (fig. 18-3 and 18-4, p. 597-598).
- *5. Define prostaglandins and leukotrienes (p. 595).
- 6. List the names and locations of the major endocrine glands (fig. 18-1, p. 593)
- B. Describe the anatomy and physiology of the pituitary gland.
 - 1. Describe the anatomy of the pituitary and its relationship to the hypothalamus of the brain using the following terms:

sella turcica infundibulum median eminence adenohypophysis releasing and inhibiting factors posterior pituitary anterior pituitary hypophyseal portal system neurohypophysis

- 2. Describe the function and feedback control of the following adenohypophyseal hormones:
 - a. growth hormone (somatotropin)

d. thyroid stimulating hormone

- b. gonadotropic hormones
- e. adrenocorticotropic hormone
- 1) follicular stimulating hormone
- *f. melanocyte stimulating hormone
- 2) luteinizing hormone

- (p. 604)
- c. prolactin (lactogenic hormone)
- 3. In reference to growth hormone, define somatomedins, glucose-sparing effect, and diabetogenic effect.
- 4. Describe the function and feedback control (if any) of the following neurohypophyseal hormones:
 - a. oxytocin
 - b. anti-diuretic hormone (vasopressin)
 - c. Define: paraventricular and supraoptic nucleus, milk-let-down reflex, antiduresis, osmoreceptors, and hypothalamic-hypophyseal nerve tract

^{*}will not be covered in class

5. Know the normal plasma osmolarity level in milliosmols per liter

*6. Define:

dwarfism diabetes insipidus Cushing's disease giantism acromegaly

- C. Describe the anatomy and physiology of the thyroid gland.
 - 1. State the location of the gland.
 - 2. Describe the anatomy of the gland by discussing lateral lobes, pyramidal lobe, isthmus, follicles, follicular and parafollicular cells.
 - 3. Discuss the functions and feedback control of thyroxin (T4), triiodothyronine (T3), and calcitonin.
 - *4. Describe the chemical formation of T3 and T4 (fig. 18-11, p. 609).
 - *5. Define:

hypo-hyperthyroidism exophthalmos Grave's disease (thyrotoxicosis) thyroglobulin

myxedema radioactive iodine uptake

cretinism goiter

thyroid storm

protein-bound iodine (thyroxin-binding globulin)

- D. Describe the anatomy and physiology of the parathyroid glands.
 - 1. Discuss the function of the feedback regulation of parathormone.
 - *2. Define hypo-hyperparathyroidism, hypo-hypercalcemia and state the abnormalities that result.
 - 3. Know what the normal blood calcium ion concentration is.
- E. Describe the adrenal (suprarenal) glands.
 - 1. Describe the anatomy and physiology of the adrenal cortex.
 - a. Describe the location of the gland and state the cellular layers (zonas) from superficial to deep and list which hormone groups are secreted by each.
 - b. Describe the function and feedback regulation of aldosterone by describing the renin-angiotensin pathway.
 - c. Know the normal blood sodium and potassium ion level
 - d. State secretion site, function of, and control of natriuretic hormone.
 - e. List the three major glucocorticoids, stating which is most abundant.
 - f. List functions of and describe the feedback control of glucocorticoids. Be sure to relate stress and chronic inflammation to the above.
 - g. Define:

*hypo-hypernatremia mineralcorticoid *hypo-hyperkalemia glucocorticoids *Addison's disease gluconeogenesis *Cushing's disease gonadocorticoids *virilism adrenocorticoids

*gynecomastia

- 2. Describe the suprarenal medulla (adrenal medulla).
 - a. List the functions of epinephrine and norepinephrine.
 - b. Define glycogenolysis, chromaffin cells, and sympathomimetic.
 - c. Discuss the relationship between the adrenal medulla and the sympathetic nervous system.

- H. Be able to discuss the endocrine functions of the Islets of Langerhans of the pancreas.
 - 1. List the functions of insulin and glucogon and the type of cells that secrete them.
 - 2. Describe the feedback control between insulin, glucogon, and blood glucose levels.
 - 3. Be able to state what the normal blood glucose level is and the primary reason for its regulation.
 - 4. Define:

alpha, beta cells ketosis hypo-hyperglycemia diabetes mellitus I, II acetic acid glucosuria glycogenesis acetoacetic acid ketones

glycogenesis acetoacetic acid ketones glycogenolysis acetone ketonuria acidosis hyperinsulinism polyuria

- F. Discuss the endocrine functions of the testes. (p. 623)
 - 1. List the functions of testosterone and inhibin.
 - 2. Discuss the relationship of testosterone, FSH, and ICSH on spermatogenesis.
 - 3. Define spermatogenesis, spermatogonia, interstitual cells of Leydig, and sustentacular cells.
- G. Discuss the endocrine function of the ovaries. (p. 623)
 - 1. List the functions and site of production of estrogens and inhibin.
 - 2. List the functions and site of production of progesterone.
- *H. Briefly describe the function of the hormone, melatonin, secreted by the pineal gland. (p. 616 and p. 114 of *Applications Manual*)
- *I. Describe the function of the hormones, leptin and resistin, secreted by adipose. (p. 624)
- *J. Describe the involvement of hormones with stress by discussing the alarm, resistance, and exhaustion phase. (pp. 626-628)
- *K. Be aware of the affect of hormones on behavior. (pp. 628)
- *L. Be aware pf the affects of hormones and athletic performance. (p. 629)
- II. **Reproductive system:** Upon completion of a study of the reproductive system, the student should be able to correctly answer questions concerning the following:
 - A. Describe the male reproductive system.
 - 1. Briefly describe the descent of the testes by defining the inguinal canal, spermatic cord, tunica vaginalis, gubernaculum, and cryptorchidism.
 - 2. Define spermatic cord and be able to list its contents.
 - 3. Describe the function of the scrotum by defining dartos and cremaster muscles.
 - 4. Describe the structure and function of the testes and associated structures by defining:

tunica albuginea sustentacular cells testes

spermatogonia tunica vaginalis spermatogenesis lobules rete testes spermatozoa

testosterone seminiferous tubules FSH interstitual cells of Leydig ICSH meiosis primary spermatocytes secondary spermatocytes spermatids

5. State parts and function of the epididymis, vas deferens, seminal vesicles, ejaculatory ducts, prostate gland, and bulbourethral glands.

^{*}will not be covered in class

- 4. Describe the anatomy of the penis and urethra by defining: prostatic, membranous, and penile urethra; corpora cavernosa, corpra spongiosum, glans, and prepuce.
- 5. Describe the composition of semen.
- B. Describe the anatomy of the female reproductive system.
 - 1. Describe the location and structure of the ovary.
 - a. Organize the ovary into its layers using the following terms: tunica albuginea, stroma (cortex and medulla).
 - b. Define oogenesis and differentiate between oogonium, primary oocyte, secondary oocyte, ovum, first and second polar body.
 - c. Define follicles and differentiate between primordial, primary, secondary (growing), tertiary (mature or Graafian) follicles, follicular cells (thecal and granulosa).
 - d. Define ovulation and corona radiata
 - e. Define corpus luteum and corpus albicans.
 - 2. State the purpose and location of parts (infundibulum, fimbriae, ampulla, and isthmus) of the fallopian tubes.
 - 3. Locate and define the following parts of the uterus:

fundus external cervical os

body cervical canal

cervix serosa

isthmus myometrium internal cervical os endometrium

- *4. Define anteflexion and retroflexion (pp. 1053)
- *5. Briefly describe the overall structure of the vagina and define Bartholin's glands (p. 1057-1059).
- *C Briefly describe the support for the female reproductive tract by defining: ovarian ligament, suspensory ligament, broad ligament (divided into mesovarium, mesosalphinx), uterosacral ligament, and round ligament.
- D. Describe the female sexual cycle (menstrual).
 - 1. State the purpose of the cycle.
 - 2. List hormones involved in the regulation of the cycle.
 - 3. Relate pituitary hormones, feedback regulation, and causes to the cyclic changes in ovarian and uterine structures. (link with objectives 4 and 5 below)
 - 4. Describe the ovarian cycle by defining follicular phase, ovulation, luteal phase
 - 5. Describe the uterine cycle by defining the menses, proliferative and secretory phase.
 - 6. Describe the hormonal and structural changes in the cycle caused by fertilization. Describe the role of human chorionic gonadotropin.
 - *7. Define: menstruation, menarche, and menopause.
- *E. Briefly describe fertilization and development by defining the following: fertilization, gestation, trimesters, cleavage, implantation, morula, blastocyst (with inner cell mass and trophoblast cells), gastrula (gastrulation), germ layers (ectoderm, mesoderm, and endoderm), placenta, extraembryonic membranes, embryo, fetus (pp. 1075-1082)
- *F. Briefly describe the chorion, amnion, the basic structure of the placenta, and placental circulation. (1082-1085)

III. **Cardiology:** study of the heart

Upon completion of a study of the heart, the student should be able to correctly answer questions concerning the following subject matter.

- A. Describe the general path of circulation.
 - 1. Define: heart, arteries, arterioles, capillaries, veinules, veins, systemic and pulmonary circulation.
 - *2. Compare the tissue structure of the different types of vessels. (pp. 709 717)
- B. Be able to describe the anatomy of the heart using the following terms:

mediastinum interventricular septum pericardium (parietal & visceral) atrial-ventricular septum

epicardium apex myocardium base

endocardium pulmonary trunk

right & left atria aorta right & left ventricle vena cavas

interatrial septum pulmonary arteries and veins

right & left AV valves foramen ovale aortic & pulmonary semilunar valves ductus arteriosus bicuspid & tricuspid valves fossa ovalis

mitral valve ligamentum arteriosum coronary arteries (and major branches) papillary muscle coronary sinus chordae tendonae

- C. Trace the path of blood through the heart, naming chambers, valves, and major vessels (aorta & vena cavas) of the systemic and pulmonary circulation.
- D. Describe how the heart muscle itself received nourishment by being able to trace the path of blood through the coronary circulation. Be able to do this by diagramming the following vessels: left and right coronary artery, anterior and posterior descending arteries, circumflex and marginal arteries, coronary veins, and coronary sinus.
- E. Discuss the electrophysiology of the heart.
 - 1. Describe the electrical properties of cardiac muscle, using the following terms: working cells, pacemaker cells, automaticity, fast and slow channels, and plateau
 - 2. Describe the location of conducting structures and trace the path of the electrical activity using the following terms:

SA node Purkinje system

atrial myocardium ventricular myocardium AV node resting & threshold potentials

AV bundle (of His) refractory periods

Rt. and left bundle branches AV delay

- 3. State why the SA node is the pacemaker.
- 4. State the purpose of the electrical conduction system described in objectives 2 and 3 above.
- 5. State why cardiac muscle will not go into tetanic contraction.
- 6. Define ectopic pacemaker. State what happens if the SA node is not the pacemaker and how the heart rate is affected by ectopic pacemakers.
- 7. Define heart block and ventricular escape.

^{*}will not be covered in class

*8. In reference to the ECG, define:

p-wave ORS interval QRS complex OT interval

t-wave Eithoven's triangle p-r interval Eithoven's standard leads

s-t segment

- F. Describe the cardiac cycle and the pumping action of the heart.
 - 1. Define systole and diastole.
 - 2. Describe the pumping action of the atria and discuss the causes of the A, C, and V waves on the atrial pressure curve.
 - 3. Describe the pumping action of the ventricles using:

period of rapid fill period of isovolumetric relaxation

dicrotic notch period of isometric (isovolumetric contraction)

period of ejection afterload 4. State the cause of valvular opening and closing.

- 5. List the names and causes of the four heart sounds.
- G. Discuss cardiac volumes
 - 1. Define: end diastolic volume and state its normal amounts
 - a. Define filling time, venous return and describe how they, along with the size of the heart affect end diastolic volume.
 - b. Define cardiac reserve.
 - c. Be able to calculate maximum heart rate, and relate it to filling time.
 - 2. Define end diastolic volume and state its normal amounts.
 - 3. Define stroke volume output and state its normal amounts
 - a. If given EDV and ESV, be able to calculate stroke volume.
 - b. Define preload, Starling's law, contractility, positive and negative inotropic agents, and afterload and describe how they affect stroke volume.
 - 4. Define cardiac output and state its normal amounts.
 - 5. If given stroke volume and heart rate, be able to calculate cardiac output.
- H. Discuss mechanisms that control cardiac output.
 - 1. Discuss factors that affect cardiac output by affecting venous return (intrinsic autoregulation flowchart)
 - 2. Discuss reflex control by the autonomic nervous system using such terms as:

parasympathetic stimulation cardioaccelerator chemoceptors

sympathetic stimulation cardioinhibitor glossopharyngeal nerve

carotid sinus vagus nerves norepinephrine greater cardiac nerves acetylcholine cardiac center baroceptors tachycardia bradycardia

*G. Define the following:

ischemia mitral valve prolapse valvular insufficiency angina pectoris heart block valvular stenosis myocardial infarction flutter fibrillation premature ventricular contraction (PVC) murmur myocarditis endocarditis balloon angioplasty cardiac arrhythmias cardiac tamponade coronary thrombosis

electrocardiogram congestive heart failure (p.138-140 AM)

*IV. Anatomy of the Circulatory System:

Upon completion of a study of the anatomy of the circulation system, the student should be able to correctly answer questions concerning the following subject matter.

A. State the origin, general location, and destination of the following major arteries:

aortic arch left gastric pericardial ascending aorta hepatic bronchial thoracic aorta splenic esophageal abdominal aorta superior mesenteric renal

inferior mesenteric testicular or ovarian coronary brachiocephalic suprarenal common iliac common carotid basilar internal iliac Circle of Willis external iliac external carotid thyrocervical trunk internal carotid femoral subclavian internal thoracic popliteal vertebral axillary anterior tibial intercostal brachial posterior tibial

phrenic ulnar celiac radial

B. State the structures drained, general location, and destination of the following major veins:

cephalic brachiocephalic hepatic external jugular internal iliac suprarenal internal jugular anterior tibial renal

basilar posterior tibial testicular or ovarian ulnar great saphenous inferior vena cava radial inferior mesenteric common iliac axillary portal (hepatic) small saphenous brachial hepatic portal system poplited

brachial hepatic portal system popliteal subclavian superior mesenteric femoral pericardial superior vena cava external iliac

azygos gastric and splenic

V. Physiology of Circulation:

Upon completion of a study of circulatory physiology, the student should be able to correctly answer questions concerning the following:

- A. Be able to describe the percentage of blood volume distribution within the different blood vessels.
- B. Discuss blood flow rates (perfusion) to different body structures at rest and at exercise.
 - 1. Correlate with metabolic rates and needs for oxygen and nutrients.
 - 2. Correlate with changing diameters of the blood vessels affecting perfusion rates.
- C. Describe the physical factors causing blood flow.
 - 1. State the importance of blood flow (perfusion).
 - 2. Describe the causes of blood flow.
 - a. Discuss the relationship of pressure gradients, elasticity of arteries and perfusion.
 - b. Describe the relationship of resistance to perfusion by discussing viscosity and tube geometry.

- D. Contrast blood flow in arteries, arterioles, capillaries, veinules, and veins according to resistance, construction, innervation, and velocity.
- E. Discuss arterial blood pressure.
 - 1. Define pulse and pulse pressure.
 - 2. Define and be able to calculate mean blood pressure.
 - 3. Derive an equation for mean arterial pressure from the equation for perfusion.
 - 4. List factors that may alter arterial pressure by affecting cardiac output.
 - 5. Discuss factors affecting blood volume.
 - 6. Discuss factors which may affect arterial pressure by affecting peripheral resistance.
 - a. Describe the vasomotor reflex
 - b. Correlate blood volume and viscosity to blood pressure

VI. Hematology: study of blood

Upon completion of a study of blood, the student should be able to correctly answer questions concerning the following:

- *A. List and describe the major functions of blood. (p. 640)
- B. Discuss the composition and functions of the major components parts of blood.
 - 1. State the quantity and the percentage of body weight made up of blood.
 - a. Define and state normal hematocrit value.
 - b. Define hypo- and hypervolemia.
 - 2. Describe the shape, size, life span, normal RBC count, and functions of the erythrocytes.
 - 3. Describe the leukocytes.
 - a. State normal WBC and differential WBC count values.
 - b. Organize leukocytes into granulocytes verses agranulocytes.
 - c. Describe the anatomy, function, and site of production of neutrophils, eosinophils, basophil, monocytes, and lymphocytes.
 - d. List and describe the properties of WBC, such as amoeboid movement, margination, diapedesis, chemotaxis, phagocytosis.
 - e. In relation to WBCs, define the following:

PMN *histocompatibility *antigen-antibody complex antigen memory T-cells poly *tissue typing antibody bands cytotoxic T-cells iuvs helper T-cells B, T, & NK-lymphocytes segs fixed macrophages free macrophages plasma cells suppresser T-cells

- 4. State normal numbers, site of production, and function of the platelets.
- 5. Be able to describe plasma.
 - a. State the volume and percentage of blood composed of plasma.
 - b. List the major chemical components of plasma.
 - c. List, describe the function, and state production site of the major plasma proteins: albumen, globulins, and fibrinogen.
- 6. Describe hemoglobin.
 - a. State the normal quantity of hemoglobin.
 - b. Discuss the effect of age on hemoglobin production.
 - c. List different forms of hemoglobin.

- d. State the major functions of hemoglobin.
- e. Describe the chemical structure of the hemoglobin molecule.
- C. Describe the process of hematopoiesis.
 - 1. Discuss the mesoblastic, hepatic, and myeloid stage of hematopoiesis.
 - 2. List and discuss the sequence of erythrogenesis using the following: stem cell, hemocytoblast, proerythroblasts, erythroblast, normoblast, and reticulocyte.
 - 3. List nutrients needed for adequate RBC formation and discuss the relationship between vitamin B12, intrinsic factor, and pernicious anemia.
 - 4. Describe the role of erythropoietin.
 - 5. In reference to iron metabolism, define: ferrous versus ferric iron, transferrin, apoferritin, ferritin, and hemosiderin.
- D. Describe the process involved in the destruction of old erythrocytes.
 - 1. State the major organs where old RBCs are destroyed.
 - 2. Describe the sequence involved in the breakdown of hemoglobin using the following terms:

heme bilirubin stercobilin globin urobilinogen liver iron urobilin urochrome jaundice

- 3. Describe the anatomy of the biliary tract.
- * E. Describe the processes that protect us from infection (immunity and inflammation).
 - 1. Define immunity. p. 764
 - 2. Organize lymphocytes into their specific varieties and briefly state the function of each. pp. 768
 - 3. List and know the basic location of lymphoid tissues such as: lymphoid nodules, tonsils, lymph nodes, thymus, and spleen. pp. 769-775
 - 4. Describe nonspecific defenses against disease.
 - a. List physical barriers. pp. 775-777
 - b. List and define varieties of phagocytes. Also define margination, diapedesis, chemotaxis, and adhesion. pp. 777-778.
 - c. Describe inflammation. pp. 781-782, fig. 22-13
 - (1) List the four local signs of inflammation.
 - (2) Describe the cells, chemicals, and steps involved in the inflammatory response.
 - (3) State the purpose (goals) of inflammation.
 - d. Briefly define other non-specific defenses such as: NK cells, complement, interferon, cytokines, fever, and pyrogens. pp. 778-780, 782
 - 5. Define the following forms of immunity: innate, active (natural and induced), passive (natural and induced). p. 782-783
 - 6. Briefly describe the process of immunity.
 - a. List and briefly describe the properties of immunity. pp. 783-784
 - b. Briefly describe cell-mediated immunity by discussing T-cells (and their varieties), antigen presenting cells, and their interactions. pp. 784-789
 - c. Briefly describe humoral immunity by discussing B-cells (and their varieties) and antibody. pp. 789-792
 - d. List and briefly define the five classes of antibody (immunoglobulin). p. 793; table 22-1

- e. List and briefly discuss how antibodies destroy antigen. pp. 792
- F. Discuss the processes involved in hemostasis.
 - 1. Define hemostasis.
 - 2. List factors that prevent coagulation.
 - 3. Define vascular spasm and platelet plug.
 - 4. Discuss the intrinsic and extrinsic pathway for clot formation using the following terms:

clotting factors thromboplastin
platelets thrombin
calcium fibrinogen
prothrombin fibrin
prothrombin activator (prothrombinase)

- 5. Define serum, thrombus, embolus, streptokinase, tissue plasminogen activator (TPA)
- G. Define the following miscellaneous hematology terms:

hematocrit anemia leukopenia
buffy coat hypochromia diff count
RBC count hyperchromia thrombocyte
polycythemia WBC count thrombocytopenia
oligocythemia leukocytosis megakaryocyte

VII. Respiratory System:

Upon completion of a study of the respiratory system, the student should be able to correctly answer questions concerning the following:

- A. State the functions of the respiratory system.
- B. List and define phases of respiration.
- *C. Describe the anatomy of the respiratory system.
 - 1. Describe the walls, contents, lining, and associated structures of the nasal cavities. pp. 817-818
 - 2. Describe the location, boundaries, and lining of the pharynx. p. 819
 - 3. Describe the anatomy of the larynx. pp. 819-820
 - a. List boundaries
 - b. List functions.
 - c. List and locate the cartilages of the larynx.
 - 4. Describe the overall anatomy of the lungs by discussing the root, hilus, surfaces, lobes, and segments. pp. 823-824
 - 5. Describe the location, boundaries, and construction of the trachea. p. 821-822
 - 6. Describe the organization of the bronchial tree by defining and stating numbers of primary, secondary, and segmental bronchi. pp. 824-826
 - 7. Describe the construction of the micro- airway tubes by defining: lobular, terminal, and respiratory bronchioles, alveolar duct, alveolar sac, and alveolus. pp. 826
 - 8. Describe the micro-anatomy and the significance of the alveolar-capillary membrane. pp. 826-829
- D. Describe the physiology of pulmonary ventilation.
 - 1. List muscles used in normal and forced inspiration and expiration.
 - *2. Review the pleural cavity, fluid, and membranes. p. 829

- 3. Define intrapleural, intra-alveolar, and ambient pressure.
- 4. Discuss factors that maintain a partial vacuum intra-pleural pressure.
 - a. State the mechanism for gas absorption from the pleural cavity.
 - b. State causes of elastic recoil of the lungs.
 - c. Discuss the relationship between surfactant and surface tension.
- 5. Define compliance and airway resistance.
- 6. List sequence of events causing inspiration and expiration.
- 7. Define the various pulmonary volumes and capacities.
- 8. Define anatomical, alveolar and physiological dead space volume.
- 9. Define and be able to calculate minute respiratory and alveolar ventilation volume.
- 10. Describe the humoral and neural control of ventilation.
 - a. Describe the Hering-Breuer reflex.
 - b. Describe the effects of blood CO₂, O₂, and pH on neural control through peripheral and central chemoceptors.
 - c. List the basic components of the respiratory center in the pons and medulla.
- E. Describe the physiology of gas exchange.
 - 1. Define Charles, Boyle's and Dalton's gas laws.
 - 2. List factors affecting diffusion of gases.
 - 3. Describe the composition of alveolar air and compare with atmospheric air.
 - 4. Describe the diffusion of oxygen and carbon dioxide across pulmonary and systemic capillary walls.
 - 5. State normal alveolar and venous pO₂, and pCO₂ values.
 - 6. Know the normal "blood gas" concentration.
 - 7. Define venous admixture.
- F. Describe the physiology of gas transport by the blood.
 - 1. Discuss oxygen transport by reviewing oxyhemoglobin and by discussing the oxyhemoglobin dissociation curve and the effects of temperature and pH on it.
 - 2. Describe the Bohr effect.
 - 3. Define O_2 hemoglobin saturation.
 - a. Know the normal "O2 sats" for both arterial and venous blood.
 - b. If given an oxyhemoglobin dissociation curve and blood gas concentration, be able to determine O₂ sat level. If given the O₂ sat level, be able to determine the blood gas concentration (O₂).
 - 4. Briefly discuss oxygen transport in the dissolved state.
 - 5. Define carboxyhemoglobin
 - 6. Discuss carbon dioxide transport by:
 - a. review carbaminohemoglobin
 - b. List four methods of carbon dioxide transport and amounts carried by each.
 - c. Define carbonic anhydrase and the chloride-bicarbonate ion shift.

VIII. <u>Digestive System:</u>

Upon completion of a study of the digestive system, the student should be able to correctly answer questions concerning the following: (Much of this material will be linked with the dissection in lab)

- A. State the overall purpose of digestion. pp. 863
- B. List the overall chemical breakdown processes for carbohydrates, lipids, protein, and nucleic acids. (see fig. 24-26 and table 24-2, pp. 903-904)

- *C. Describe the overall anatomy of the G-I tract.
 - 1. List and state the purpose of the different types of teeth. p. 874
 - 2. State dentition of the deciduous and permanent teeth. p. 874
 - 3. State the location, drainage, and type of saliva produced by the parotid, submaxillary, and sublingual glands. pp. 871-872
 - 4. Define mastication (chewing) and list muscles of mastication (temporalis and masseter).
 - 5. List and define the layers of the G-I tract wall as seen in cross section. pp. 866-868
 - 6. Describe the location, purpose, mucosa and muscularis makeup of the esophagus. p. 875-876
 - 7. Define the following areas and parts of the stomach: pp. 877-881

gastroesophageal junction pyloric valve

cardia rugae

fundus gastric glands antrum -mucous cells body -parietal cells curvatures (greater, lesser) -chief cells pylorus

- 8. Describe the overall anatomy of the small intestine. pp. 884-887
 - a. Describe the course of the duodenum.
 - b. Define and locate the jejunum and ileum.
 - c. Contrast the mucosa of the small intestine segments by defining: villi, Brunner's glands, central lacteal, and Peyer's patches.
- 9. Describe the biliary system. pp. 888-895
 - a. List the lobes of the liver.
 - b. List the major functions of the liver and gall bladder.
 - c. Describe the drainage of bile from the liver by locating and defining: hepatic cystic, common bile ducts; ampulla of Vater, and sphincter of Oddi.
 - d. Describe the overall location, parts, and drainage of the pancreas.
- 10. Describe the overall anatomy of the large intestine by defining and locating: pp. 896-901

ileo-cecal valve ascending colon sigmoid colon splenic flexure transverse colon hepatic flexure

descending colon cecum rectum

appendix haustra

11. Define the following:

mastication greater omentum duodenal cap

deglutition lesser omentum duodenojejunal flexure

bolus mesentery peritoneum

chyme mesocolon

- *D. Describe the overall physiology of the digestive system.
 - 1. State the purpose of G-I tract secretions. p. 902
 - 2. List the chemical secretions and digestive action of saliva. pp. 871-872 and fig. 24-26 and table 24-2, pp. 903-904
 - 3. Describe the digestive functions of the stomach. pp. 879-880
 - a. Describe the chemical mechanism of hydrochloric acid secretion by the parietal cells of the stomach. p. 881 and fig. 24-14

- b. Describe the chemical activation of pepsinogen into pepsin and the digestive function of it on protein molecules. p. 880 and fig. 24-26 and table 24-2
- 4. List the digestive secretions of the pancreas and the digestive actions of each. p.889 and fig. 24-26 and table 24-2
- 5. Describe the effect of the hormone, cholecystokinin on the ball bladder. p.894-895
- 6. State the purpose of bile. p. 894
- 7. List the digestive secretions of the small intestine and the digestive actions of each. fig. 24-26 and table 24-2
- 8. Describe the basic absorption of nutrients. pp. 903-907
- 9. State the digestive and absorption functions of the large intestine. p. 899-900
- 10. Describe basic movements of the G-I tract.
 - a. Define segmentation and peristalsis. pp. 868
 - b. Define enterogastric reflex and defecation. pp. 883, 863, fig.24-25; p.901
 - c. Define gastrin and secretin. pp. 880, 883, 987, 889, 895-896

IX. Excretory System:

Upon completion of a study of the excretory system, the student should be able to correctly answer questions concerning the following:

- A. List the functions of the excretory system.
- B. Locate and describe the fixation and shape of the kidneys.
- C. Describe the internal anatomy of the kidneys.
 - 1. Locate the following: capsule, hilus, cortex, medulla, pyramids, columns, calyx, and pelvis.
 - 2. Describe the structure of the nephron.
 - 3. Describe the blood supply to the kidneys and nephrons within.
- D. Describe the course of the ureters.
- E. Describe the overall anatomy of the urinary bladder by defining trigon, urethra, internal and external urethral sphincters.
- F. Describe the basic physiology of micturition.
- G. Describe the physiology of urine formation.
 - 1. Discuss the dynamics of glomerular filtration.
 - a. Define glomerular filtration.
 - b. State the cause of glomerular filtration.
 - c. State composition of glomerular filtrate.
 - d. State regulation of glomerular filtration rate and its effect on urine formation.
 - 2. Describe tubular reabsorption.
 - a. Define tubular reabsorption.
 - b. State the quantity of glomerular filtrate that is reabsorbed.
 - c. State which chemical substances are reabsorbed.
 - d. Describe the basic mechanism for the reabsorption of an ionic and a non-ionic chemical substance using NaCl and glucose as examples.
 - e. Describe the counter-current mechanism for producing a dilute or concentrated urine by discussing osmolarity changes associated with the loop of Henle and the mechanism of ADH.

- f. Describe how the kidneys regulate the normal plasma concentration of sodium, potassium, and calcium ions through tubular reabsorption controlled by the hormones aldosterone and parathormone.
- X. <u>Acid-Base Regulation:</u> Upon completion of a study of acid-base regulation, the student should be able to correctly answer questions concerning the following:
 - A. State normal range for blood pH and extreme ranges for acidosis and alkalosis.
 - B. List three defense mechanisms for controlling body fluid pH.
 - C. List and discuss acid-base buffers within body fluids.
 - 1. Define buffer.
 - 2. Using the Henderson-Hasselbach equation, demonstrate the dynamics of the carbon dioxide-bicarbonate ion buffer system.
 - 3.List other chemical buffers within the body fluids and relate their buffering power compared to the carbon-dioxide-bicarbonate ion buffer system.
 - D. Describe how the respiratory system regulates pH.
 - 1. Discuss effects of hydrogen ion concentration on alveolar ventilation and visa versa.
 - 2. Relate the buffering power of the respiratory system to that of chemical buffers of the body fluids.
 - E. Describe how the kidneys regulate pH.
 - 1. Describe tubular secretion of hydrogen ions.
 - *F. Define and list causes of: respiratory acidosis, respiratory alkalosis, metabolic acidosis, and metabolic alkalosis.

SPECIFIC OBJECTIVES FOR THE LABORATORY PORTION OF THE COURSE

- I. **Renal Regulation of Osmolarity of Body Fluids Experiment Lab:** The student will correctly complete a class experiment demonstrating how the kidneys regulate osmolarity of body fluids and <u>complete a laboratory report describing the experiment and answering questions</u>.
- II. **Internal Anatomy of the Cat:** Upon completion of a dissection of the internal anatomy of the cat, the student should be able to correctly identify the following structures during a laboratory practical exam.

Chapter: "Digestive System"

lymph nodes cerebellum parotid gland cerebrum

parotid duct hypophysis (pituitary gland)

submaxillary gland medulla submaxillary duct pons

sublingual gland nasal choncha incisors internal nares canines palatine tonsils premolars pharynx nolars larynx papillae of tongue glottis

frenulum of tongue epiglottis hard palate cricoid cartilage

soft palate jejunum thyroid cartilage, arytenoid cartilage ileum vocal cord cecum

thyroid gland ascending colon trachea transverse colon pleural cavity descending colon

mediastinum rectum parietal & visceral pleura mesocolon

anterior, middle, & posterior right medial & lateral liver lobe lobes of lungs left medial & lateral liver lobe

bronchi caudate liver lobe
pericardium gall bladder
pericardial cavity cystic duct
heart hepatic duct
thymus gland common bile duct
root of lung falciform ligament

parietal & visceral peritoneum diaphragm

peritoneal cavity central tendon of the diaphragm

greater omentum **celiac artery
omental bursae **hepatic artery
gastrosplenic ligament **gastric artery
lesser omentum **splenic artery

gastrohepatic ligament **superior mesenteric artery

**portal vein (hepatic portal vein) hepatoduodenal ligament **superior mesenteric vein spleen epiploic foramen **gastrosplenic vein mesentery greater & lesser curvature of stomach mesoduodenum ileocecal valve duodenum pancreas stomach ampulla of Vater fundus of stomach pancreatic duct cardiac orifice body of stomach pyloric valve pylorus of stomach

esophagus

**to be identified on the second lab practical exam with the circulatory system

Chapter: "Urogenital System"

internal & external inguinal ring kidneys adrenal gland ductus deferens (vas deferens) prostate gland hilus of kidney bulbourethral gland ureter urinary bladder epididymus ovaries urethra mesovarium penis

ovarian ligament scrotum Graffian follicles testes corpus luteum spermatic cord inguinal canal fallopian tube

abdominal ostium (infundibulum) mesosalpinx

uterine horns fimbrae cervix body of uterus

vagina urethral orifice mesometrium labia majora broad ligament clitoris

Chapter "The Circulatory System"

pulmonary artery left & right subclavian artery pulmonary veins left & right common carotid artery precava (superior vena cava) internal & external carotid artery

internal & external jugular veins internal mammary artery

intercostal veins vertebral artery axillary artery internal mammary veins innominate veins (brachiocephalic) brachial artery intercostal arteries subclavian veins axillary veins celiac artery

brachial vein superior mesenteric artery

aorta (ascending, arch, thoracic, renal arteries

abdominal) spermatic (testicular) artery

innominate artery (brachiocephalic) ovarian artery

inferior mesenteric artery postcava (inferior vena cava) ovarian or spermatic vein hepatic vein external iliac artery femoral artery popliteal artery femoral vein

Chapter "Nervous System"

meninges medulla
-dura mater spinal cord
-arachnoid mater facial nerve
-pia mater cervical plexus
cerebrum brachial plexus
gyrus phrenic nerve
sulcus vagus nerve

fissure lumbosacral plexus corpus callosum femoral nerve sciatic nerve

cerebellum sympathetic ganglia (trunk)

pons

III. **Anatomy of the Heart Lab**: Upon completion of a dissection of a heart, the student should be able to complete a lab practical exam.

A. Complete a dissection of a heart and be able to identify the following heart structures on a lab practical exam.

parietal pericardium bicuspid valve visceral pericardium pulmonary valve pericardial space aortic valve

epicardium interventricular septum

myocardium superior and inferior vena cava

endocardium aorta

right and left atria pulmonary artery right and left ventricles pulmonary veins tricuspid valve coronary arteries papillary muscles chordae tendonae

IV. Cardiovascular Physiology Lab:

Upon completion of a lab exercise, the student should be able to complete a lab report concerning the following:

- A. Record an electrocardiogram, and from the tracing, be able to:
 - 1. identify p, qrs, t-waves, and s-t segment
 - 2. determine the p-r interval
 - 3. determine the heart rate
- B. Record the pulse wave and on it identify the dicrotic notch.
- C. Listen to heart sounds, identifying S1 and S2 and the valves making the sound.
- D. Obtain a blood pressure

- V. **Hematology Lab:** Upon completion of a laboratory study of blood, the student should be able to correctly answer questions concerning the following and have completed the following:
 - A. The student is to complete the following complete blood count (CBC) tests:

wbc count hemoglobin determination

differential wbc count hematocrit

rbc count

- B. The student is to determine blood glucose concentration, sedimentation rate, blood type (ABO and Rh), and calculate estimation of blood volume, total O₂ carrying capacity, mean corpuscular volume (MCV), mean corpuscular hemoglobin (MCH), and mean corpuscular hemoglobin content (MCHC).
- C. The student should be able to interpret results, define hematology terms given in this lab, and describe the basic methods used for analysis.

VI. Anatomy of the Kidney Lab:

A. Upon completion of a dissection of a kidney, the student should be able to correctly identify the following:

renal capsule cortex renal artery pyramid renal vein papillae ureter pelvis hilus calyx

- B. Perform a routine urine analysis composed of a basic physical, chemical, and microscopic exam.
- VII. **Respiratory Physiology Lab**: Upon completion of gathering data from respiratory physiology experimentation, the student should be able to correctly complete a lab report containing the following:
 - A. Data from the following pulmonary function tests using a spirometer:

tidal volume daily pulmonary ventilation expiratory reserve volume maximal breathing capacity inspiratory reserve volume forced expiratory volume (1 sec.) vital capacity minute respiratory volume

- B. Data from exercises demonstrating neural and humoral control of pulmonary ventilation.
- C. Upon completion of the exercise, the student will also correctly answer examination questions concerning the following:
 - 1. Definitions of lung volumes and capacities.
 - 2. Neural and humoral control of respiration.
 - 3. Definitions of respiratory terms listed in the laboratory exercise.

COURSE OUTLINE: BIO 212 - HUMAN ANATOMY & PHYSIOLOGY II

I. Endocrinology

- A. Hormonal action and control
- B. Hormones, function, control, structures, and disorders of endocrine glands
 - 1. Adenohypophysis
 - 2. Neurohypophysis
 - 3. Thyroid
 - 4. Parathyroid
 - 5. Adrenal cortex
 - 6. Adrenal medulla
 - 7. Testes
 - 8. Ovaries
 - 9. Pancreas

II. Reproductive system

- A. Male reproductive system
- B. Female reproductive system
- C. Female reproductive cycle
- D. Fertilization and development

III. Cardiology

- A. General path of circulation
- B. Anatomy of the heart
- C. Path of blood flow through the heart
- D. Electrophysiology
- E. Pumping action and cardiac cycle
- F. Control of cardiac output

IV. Circulation

- A. Major systemic arteries
- B. Major systemic veins
- C. Physiology of circulation
 - 1. Physics of blood flow
 - 2. Blood pressure

V. Hematology

- A. General functions and characteristics of blood
- B. Formed elements
 - 1. Erythrocytes
 - a. characteristics; Lab values
 - b. hemoglobin
 - c. formation of

- d. iron metabolism
- e. destruction of
- 2. Leukocytes
 - a. characteristics; Lab values
 - b. role in immunity and inflammation
- 3. Platelets
- C. Plasma
- D. Hemostasis
- E. Immunity

VI. Respiratory system

- A. Functions and overview
- B. Anatomy of the airway
- C. Pulmonary ventilation
- D. Gas exchange
- E. Gas transport

VII. Digestive system

- A. Purpose and overview
- B. Chemical hydrolysis of food
- C. Anatomy of the G-I tract and accessory structures
- D. Biliary system
- E. G-I motility
- F. Secretion and absorption

VIII. Excretory system

- A. Functions and overview
- B. Chemicals excreted
- C. Macro and microscopic anatomy of the kidneys
- D. Urinary tract
- E. Urine formation
- F. Renal regulation of fluid and electrolytes

IX. Acid-Base Balance

- A. pH and normal ranges
- B. Regulatory mechanisms
- 1. Acid-base buffers
- 2. CO₂ bicarbonate ion ratio
 - 3. Respiratory regulation
 - 4. Renal regulation
- C. Metabolic and respiratory acidosis/alkalosis

TENTATIVE ACADEMIC SCHEDULE Spring Semester, 2008

Lecture: Monday and Wednesday, 11:00 - 12:25, room 216

Jan. 23: Endocrine system	Mar. 24: Heart (con't) Mar 26: Circulation
Jan. 28: Endocrine system (con't)	Trui 20. Circulation
Jan. 30: Endocrine system (con't)	Mar.31: Blood pressure April 2: Blood
Feb. 4: Endocrine system (con't)	•
Feb. 6: Endocrine system (con't)	April 7: Blood (con't) April 9: Blood (con't)
Feb. 11: Endocrine system (con't)	, ,
Feb. 13: Male Reproductive system	April 14: Exam #2 April 16: Blood and Immunity
Feb. 18: Female Reproductive system	
Feb. 20: Heart	April 21: Digestive system April 23: Digestive system (con't)
Feb. 25: Heart	
Feb. 27: Exam #1	April 28: Respiratory system April 30: Respiratory system (con't)
Mar. 3: Heart (con't)	
Mar. 5: Heart (con't)	May 5: Respiratory system (con't) May 7: Respiratory system (con't)
Mar. 10: Heart (con't)	
Mar. 12: Heart (con't)	May 12: Acid/Base balance May 14: Exam #3
Mar. 17: Spring Break	
Mar. 19: Spring Break	
	*** April 20. I act day to withdraw

*** April 29: Last day to withdraw

TOPIC ORDER AND TEXTBOOK READING

Unit I: *Martini; Endocrinology; chapter 18; *Applications Manual*, pp. 107-118 Unit II: Martini; Reproductive system; chapter 28 and pp. 1095-1108; *Applications*

Manual, pp. 213-237

- Unit III: Martini; Heart, chapter 20; Applications Manual, pp. 134-141
- Unit IV: Martini; Anatomy of the Blood Vessel and Circulation Routes; 709-718; *Applications Manual*, p. 141
- Unit V: Martini; Physiology of Circulation; pp. 718-758; *Applications Manual*, pp. 141-146
- Unit VI: Martini; Hematology: chapter 19 and 22; *Applications Manual*, pp. 120-133, 147-162
- Unit VII: Martini; Respiratory system; chapter 23; Applications Manual, pp. 164-175
- Unit VIII: Martini; Digestive system; chapter 24; Applications Manual, pp. 176-199
- Unit IX: Martini; Excretory system; chapter 26; Applications Manual, pp. 200-208
- Unit X: Martini; Acid-Base Balance; pp. 1007-1019; *Applications Manual*, pp. 208-212 **Fundamentals of Anatomy & Physiology*, by Martini, Prentice Hall Publishers, 7th ed.

Tentative Academic Schedule - Lab <u>Spring Semester, 2008</u> Monday or Wednesday - 1:00 - 4:00, Rm. 214

Monday Lab	Wednesday Lab
	1/23: Endocrinology lecture
1/28: Endocrinology lecture	1/30:Renal Regulation of Osmolarity
2/4: Renal Regulation of Osmolarity	2/6: Cat dissection
2/11: Cat dissection	2/13: Cat dissection
2/18: Cat dissection	2/20: Cat dissection
2/25: Cat dissection	2/27: Lab Practical Exam 1 followed by cat diss.
3/3: Lab Practical Exam 1 followed by cat diss.	3/5: Heart dissection/Cat dissection
3/10: Heart dissection/Cat dissection	3/12: Cardiovascular physiology
3/17: Spring Break (no classes, lab is open) is open)	3/19: Spring Break (no classes, lab
3/24: Lab Practical Exam 2 followed by video	3/26: Lab Practical Exam 2 followed by video
3/31: Cardiovascular physiology	4/2: Blood analysis
4/7: Blood analysis	4/9: Blood analysis
4/14: Blood analysis	4/16: Blood quiz /kidney anatomy/urine analysis
4/21: Blood quiz /kidney anatomy/urine analysis	4/23: Pulmonary function analysis
4/28: Pulmonary function analysis	4/30: lab quiz over pulmonary volumes and urine analysis followed by lecture
5/5: lab quiz over pulmonary volumes and urine analysis followed by lecture	5/7: TBA
5/12: TBA
